

The public comment period on the Donlin Gold project has been extended.
Use this postcard to comment.

Please send your postcard to the U.S. Army Corps of Engineers with postmark before the May 31, 2016 deadline.

I am highly against the Donlin
Gold project. Leaking mercury
and buried cyanide solution,
plus having a mountain not
progress, but destruction left
alone mercury leaching into
the Kuskokwim River will cause
many people to get cancer
and the possibility of cyanide
spills, poisoning the water
ways where the majority of the
people get their food.
Birth defects will soon
be rare down river from
this mine. Barrick Gold
Co. does not have a good
history.
