

US Army Corps of Engineers Donlin Gold Project EIS

Comment Form

The Corps welcomes your comments on the Draft Environmental Impact Statement. If you'd like to mail your comments, please feel free to use this form. Write your comments below then fold this page in thirds so the mailing address shows. Additional pages can be inserted. Remember to affix first class postage. You can also email your comments to POA.donlingoldeis@usace.army.mil, or fax them to (907) 753-5567.

Important topics for comments would include:

- Comments and questions about the accuracy of information in the Draft EIS.
- Comments and questions about the adequacy of methods or assumptions used.
- New information to be considered in preparing the Final EIS.
- New reasonable alternatives or revisions to current alternatives.
- Additional measures to reduce impacts (mitigation).

March 23, 2016

Donlin Gold project should not be allowed to operate, due to a number of reasons.

1. Subsistence: Our salmon species will be jeopardized once development occurs by potentially poisoning them with cyanide. Argentina Gold Mines were recently publized by looking for whomever is responsible for this spill of cyanide. It might happen here! Cyanide will be barged in with state of the art ISO containers but if spills occur from tailings it will devastate the fishing and wipe them out.

2. Socio-economic: We will be here after the Donlin Gold project is over and done with. We will be maintaining our subsistence way of life.

3. Mercury: Contamination of mercury and arsenic are ever prevalent for our health and well-being. It is estimated that these chemicals are going airborne and we are in the direct path of the north easterly winds where some will be carried away but some will eventually land damaging our Tundra lands blackfish, white fish, lush, and pike fish that we depend on for subsistence.

From; Nunapitchuk IRA Council

President Wassilie Pleasant

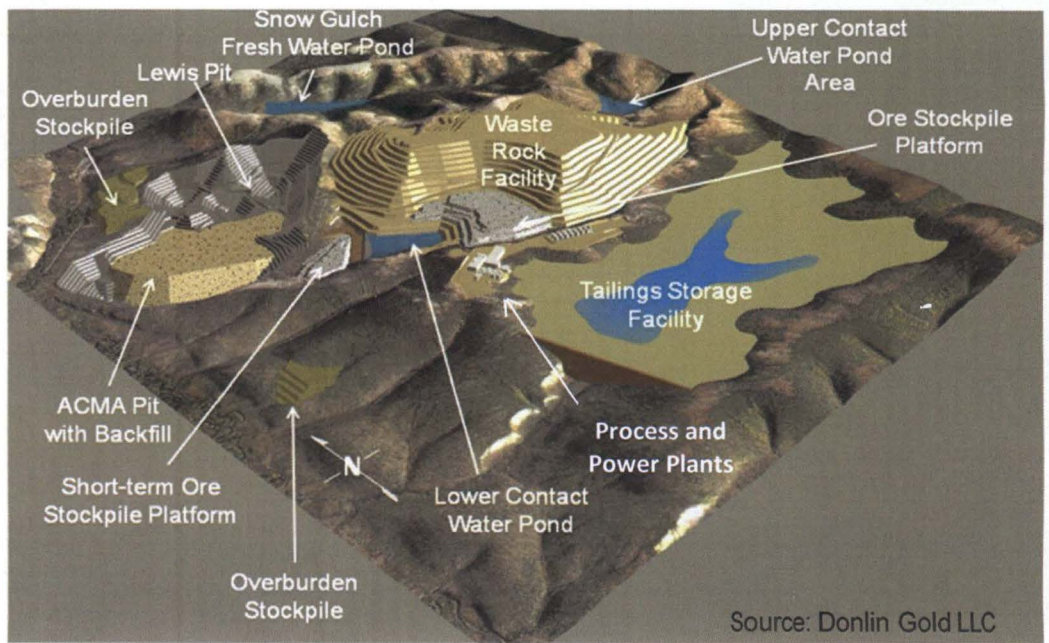

Layout of Proposed Mine Site

The image to the right illustrates the eventual layout of a proposed gold mine, ten miles north of the community of Crooked Creek on the Kuskokwim River in southwestern Alaska, for which the US Army Corps of Engineers is preparing an EIS. The project, proposed by Donlin Gold, LLC, includes a natural gas pipeline and transportation and components. You may use this mail-in form to submit comments.
